

Notice! This page describes the *nature of the error* using a hypothetical example and not the erroneous data of the input test file. You should however be able to apply this information to your error case.

General description of the error:

The format of the error message: cvc-enumeration-valid: Value "{0}" is not facet-valid with respect to enumeration "{1}". It must be a value from the enumeration.

Error description in schema standard: <http://www.w3.org/TR/2006/WD-xmlschema11-2-20060217/datatypes.html#cvc-enumeration-valid>

Possible causes for this error:

- The value given for the element is not in the enumerations list for the element which is defined in the schema.

An example

```
<PmtTpInf>  
  <InstrPrty>DAVE</InstrPrty>  
</PmtTpInf>
```

Error message: *Error cvc-enumeration-valid: Value 'DAVE' is not facet-valid with respect to enumeration '[HIGH, NORM]'. It must be a value from the enumeration.*

How to fix: The value for 'InstrPrty' must be replaced with a valid value from the enumerations list in the schema. In this case it's either HIGH or NORM.

```
<PmtTpInf>  
  <InstrPrty>HIGH</InstrPrty>  
</PmtTpInf>
```
