

Notice! This page describes the *nature of the error* using a hypothetical example and not the erroneous data of the input test file. You should however be able to apply this information to your error case.

General description of the error:

The format of the error message: cvc-maxExclusive-valid: Value "{0}" is not facet-valid with respect to maxExclusive "{1}" for type "{2}".

Error description in schema standard: <http://www.w3.org/TR/2006/WD-xmlschema11-2-20060217/datatypes.html#cvc-maxExclusive-valid>

Possible causes for this error:

- Value given for element is too big compared to allowed maximum value. maxExclusive specifies the upper bounds for numeric values: the value must be less than this value and not equal (that's why it is maxExclusive)

An example

```
<Rate>5.1415926535</Rate>
```

Error message: Error cvc-maxExclusive-valid: Value '5.1415926535' is not facet-valid with respect to maxExclusive '4.0' for type 'PercentageRate'.

How to fix: Value given for 'maxExclusive' field must be less than the defined maximum value. In this case for example value "3.9" is accepted because it is less than "4".

```
<Rate>3.9</Rate>
```
