

PstlAdr is defined as follows in the schema for UltmtDbtr and Cdtr:

In practice, there are some rules when using these elements:

Rule 1: If AdrLine is not used, data must be within 140 characters.

Rule 2: If AdrLine is used, AdrTp or Ctry must be present.

Rule 3: If AdrLine is used, no other than AdrTp and Ctry are allowed
