

Base URL

All URLs have following base

Production API

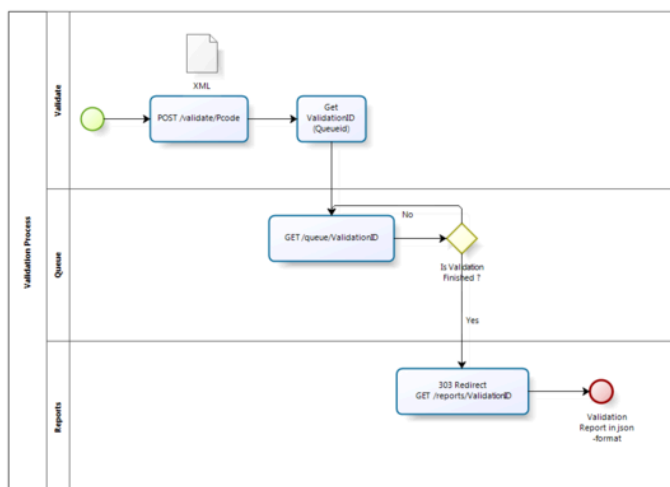

<https://api.xmldata.com/v1/>

XMLdata API Service uses https protocol which ensures that all data is transferred in encrypted format.

Validation Process Summary

Here's the short summary of validation process via API Service.

- [Send file for validation](#) and store {id}
- [Poll validation queue](#) with given {id} to see status of the validation
- When validation is completed, queue resource redirects to validation reports automatically
- OR you can fetch validation report from [reports -resource](#)
