

Description of the method

Description:	.contains() method tests if the string contains the sequence of characters given as a parameter for the method. The method returns true if the sequence of characters is found from the string.
Available for:	string
Parameters:	string
Return type:	boolean

Example

Context:	HeaderType1
OCL:	self.Id.contains('content')
Description:	The example rule checks if the value of element <Id> contains character sequence 'content'.

The XML snippet below would pass this check as it contains string content in the value.

```
<Id>Idcontentvalue2</Id>
```

The other snippet below however would not pass this check.

```
<Id>IdContent</Id>
```

Attached you can find example schema and files which you can use for testing.
