

Description of the method

Description:	.size() method returns the length of a string. N.B. use the dot (.) operator and not the arrow (->) to find out the length of the value. The arrow operator is used for getting the count of elements.
Available for:	string
Parameters:	-
Return type:	integer

Example

Context:	HeaderType1
OCL:	self.Id.size() <= 20
Description:	The example rule check the length of the value of <Id> element and check that it is less than or equal to 20.

The XML snippet below would pass this check. The length of the value is 20.

```
<Id>IdContentLengthOf20.</Id>
```

The other snippet below however would not pass this check, the length of the value is 21.

```
<Id>IdContentLengthOf21..</Id>
```

Attached you can find example schema and files which you can use for testing.
