

When schemaLocation is given, it's recommended to specify it with namespace value, in CT with

```
urn:iso:std:iso:20022:tech:xsd:pain.001.001.03
```

In DD with

```
urn:iso:std:iso:20022:tech:xsd:pain.008.001.02
```

For example the following is a correct way to present the <Document> tag in CT:

```
<?xml version="1.0" encoding="UTF-8"?>  
<Document xmlns="urn:iso:std:iso:20022:tech:xsd:pain.001.001.03"  
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"  
xsi:schemaLocation="urn:iso:std:iso:20022:tech:xsd:pain.001.001.03 pain.001.001.03.xsd">
```

Has to be valid when given

Optional part, used to describe the physical location of the schema. In XMLspy, for example, it's used for validating the file against schema.
