

## Description

This section contains additional tasks after the basic section is completed

## Tasks

1. Create another project, using Studio reference schema and the already made group ruleset
2. Create another ruleset for this project, which is used for the rules described below
3. Make validation rules for a business rule: all name elements are ignored by the bank
4. In the group ruleset, change the logic so that information level message is given when Transaction/Id is not value“ExampleTxId”
