

Notice! This page describes the *nature of the error* using a hypothetical example and not the erroneous data of the input test file. You should however be able to apply this information to your error case.

Error description:

The value of an element is not within the accepted range of values.

Example:

"Element 'InstdAmt': [facet 'maxInclusive'] The value '100.00' is greater than the maximum value allowed ('99.99')."

Explanation of the error message given by the validator:

"Element 'X': [facet 'maxInclusive'] The value 'XX' is greater than the maximum value allowed ('YY')."

The value **XX** of element **X** is too large. The maximum value is **YY** but the value is greater than that.

Similarly, while the facet 'maxInclusive' in the schema sets the ceiling value for an element, facet '**minInclusive**' is used to define the floor value.
