

Description of the method

Description:	.toReal() method returns a real value converted from the given value.
Available for:	string
Parameters:	-
Return type:	real

Example

Context:	TransactionType1
OCL:	self.Id.toReal() = 100.01
Description:	The example rule tries to convert the value of <Id> to a real number and then compares it to the number 100,01. If <Id> is convertable and matches 100,01, true will be returned.

The XML snippet below would pass this check.

```
<Id>100.01</Id>
```

The other snippet below however would not pass this check.

```
<Id>101.00</Id>
```
