

Description of the method

Description:	.floor() method returns the integer quotient of the given value.
Available for:	integer, real
Parameters:	-
Return type:	integer

Example

Context:	TransactionType1
OCL:	self.Amount.floor() = 30
Description:	The example rule compares the integer quotient of the amount to the integer 30. If the integer quotient is 30, true will be returned.

The XML snippet below would pass this check.

```
<Amount>30</Amount>
```

Also the XML snippet below would pass this check.

```
<Amount>30.95</Amount>
```

The snippet below however would not pass this check.

```
<Amount>25</Amount>
```
