

Description of the method

Description:	.minus{Days Months Years}() method reduces as many of days or months or years as the integer in the parameter indicates.
Available for:	ISO Date, ISO Date Time
Parameters:	integer
Return type:	ISO Date, ISO Date Time

Example

Context:	HeaderType1
OCL:	self.TimeStamp.minusDays(2) = self.Dt
Description:	The example rule compares the date of <TimeStamp> minus 2 days to the date of <Dt>. If the date of <TimeStamp> after the reduced days equals the date of <Dt>, true will be returned. This works in the same way with months and years.

The XML snippet below would pass this check.

```
<Header>
  <Dt>2018-05-26</Dt>
  <TimeStamp>2018-05-28T12:17:50</TimeStamp>
</Header>
```

The other snippet below however would not pass this check.

```
<Header>
  <Dt>2018-05-31</Dt>
  <TimeStamp>2018-05-28T12:17:50</TimeStamp>
</Header>
```
