

Description of the method

Description:	.isValidCurrencyCode() checks if the given currency code is valid based on the list provided by the ISO 4217 (http://www.currency-iso.org/iso_inde..._tables_a1.htm)
Available for:	string
Parameters:	-
Return type:	boolean

Example

Context:	TransactionType1
OCL:	self.Amount.Ccy.isValidCurrencyCode()
Description:	The example rule checks if the given currency code is valid.

The XML snippet below would pass this check.

```
<Amount>
  <Ccy>EUR</Ccy>
</Amount>
```

The other snippet below however would not pass this check.

```
<Amount>
  <Ccy>2018-05-30</Ccy>
</Amount>
```
