

Description of the method

Description:	.isValidCountryCode() method checks if the given country code is valid based on the list that can be found here: (http://www.iso.org/iso/country_names..._code_elements).
Available for:	string
Parameters:	-
Return type:	boolean

Example

Context:	HeaderType1
OCL:	self.PstlAdr.Ctry.isValidCountryCode()
Description:	The example rule checks if the given country code is valid.

The XML snippet below would pass this check.

```
<PstlAdr>
  <Ctry>FI</Ctry>
</PstlAdr>
```

The other snippet below however would not pass this check.

```
<PstlAdr>
  <Ctry>Finland</Ctry>
</PstlAdr>
```
