

## Description of the method

<b>Description:</b>	.isValidReference('FI') method checks if the given text is a valid Finnish reference. Method checks that the value is numeric and contains from 3 to 20 characters.
<b>Available for:</b>	string
<b>Parameters:</b>	-
<b>Return type:</b>	boolean

## Example

<b>Context:</b>	TransactionType1
<b>OCL:</b>	self.Amount.REF.isValidReference('FI')
<b>Description:</b>	The example rule checks if the given reference is valid.

The XML snippet below would pass this check.

```
<Amount>
  <REF>1234561</REF>
</Amount>
```

The other snippet below however would not pass this check.

```
<Amount>
  <REF>AA123123</REF>
</Amount>
```
