

Field block count must match the number of blocks in the file. In ACH-file, each complete and partial collection of 10 lines constitute as one block. This means that a file with 7 lines constitutes as a partial collection of one block, therefore block count of the file is 1. File with 15 lines would have a block count if 2.

Below sample file contains a valid block count value (9 lines total)

```
101 00000000 01160000000120600001090001AA Bank      AA Bank
