

Notice! This page describes the *nature of the error* using a hypothetical example and not the erroneous data of the input test file. You should however be able to apply this information to your error case.

### **Error Description:**

Attribute for some element is marked as mandatory but it is missing. Add the attribute. The attribute name could also be mistyped.

#### **Example:**

```
95: <InstdAmt ccy="EUR">100.00</InstdAmt>
```

**ERROR (1868):** *Element 'InstdAmt': The attribute 'Ccy' is required but missing.*

See more details for this error from [WIKI](#)

In this example the InstdAmt element is having an attribute called "ccy". The error message requires a parameter called "Ccy" to be given. In this case the error can be fixed by fixing the typing mistake in original attribute (the capital first letter).

### **Explanation of the error message given by the validator:**

Element '**elem1**': The attribute '**att1**' is required but missing.

Element **elem1** is the element which is marked to have a mandatory attribute called **att1**.
