

Notice! This page describes the *nature of the error* using a hypothetical example and not the erroneous data of the input test file. You should however be able to apply this information to your error case.

Error description:

Meaning that the element has an attribute with no value specified. The value should be given.

Example:

```
13:    <PstlAdr Ctry>
      ERROR (41): ~~~~~
      Specification mandate value for attribute Ctry
      See more details for this error from WIKI
```

Element <PstlAdr> has here an attribute called "Ctry", but no value is given for the country. A value should be added, e.g. like this:

```
<PstlAdr Ctry="FI">
```

Error message given by the service:

"Specification mandate value for attribute A"

Attribute called **A** should be given a value.
